

```
I = imread('peppers.png');  
imshow(I);
```

For selecting only the bright red part of the image

These images are not so sharply segmented, leading to an interesting type of contrast and gradient. Try playing around with this and see what happens!

```
I_red = I;  
I_red(I_red(:,:,1)<128) = 0;  
imshow(I_red)
```

```
I_red(:,:,2:3) = 0;  
imshow(I_red)
```
